PERFORMANCE ANALYZER

Replay and analyze your races with no laptop on-board

● Capture NMEA data with a Palm Pilot

Log all the data while you are sailing, without risking the life of your laptop

● Replay the race with your crew

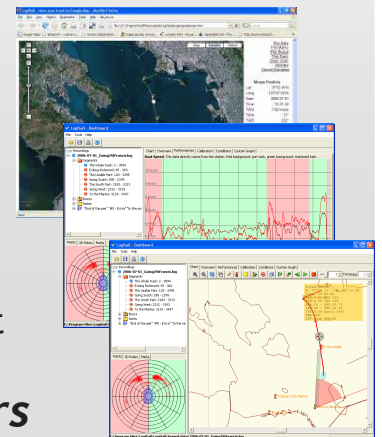

Once ashore, visualize and replay the race on a computer to debrief with your crew

● Analyze your tactic and performance

Analyze all the data such as laylines, boat speed vs. target speed, quality of tacks/gybes, wind & current shifts, ...

● Calibrate instruments & refine the polars

Determine instruments calibration and visually optimize the boat's polars

Feature list:

- Record more than 20 hours of data
- One button synchronization with a computer
- Google map and Google Earth visualization
- Visualize boat's track, wind, current, buoys, laylines
- Analysis and rating for all the tacks and gybes
- Boat/target speed, VMG, heading, course over ground,...
- Wind/current force and direction, true and apparent, ...
- Custom charts to analyze performance and conditions
- Speedo, compass and vane calibration
- Drag and drop polar definition

System requirements :

On board: Palm Pilot with Palm Universal Connector cable, Navigation Instruments with a compatible NMEA out interface.

Ashore: Laptop or desktop computer, Windows XP, > 500 MHz Processor, 256MB RAM, 200MB free disk space
